Introduction

This 2008 Physician Directory and Services Guide is meant to be a handy reference tool for finding physicians or for learning more about specific services offered at the hospital.

The directory is conveniently split into two sections:

1.) The first contains a pictorial directory of the Olean General Hospital active medical staff members with residency training information and contact phone numbers. All of Olean General Hospital’s physicians are board-certified or board-eligible as required by the hospital medical staff by-laws. The pictorial directory is followed by an alphabetical listing of all medical staff by specialty.

2.) The second section contains a listing of many services available at Olean General Hospital along with the hours of operation and phone numbers.

As information is always subject to change, please visit www.ogh.org or call any of the listed numbers for additional information or to schedule an appointment.

Behavioral Health / 2 East

The Behavioral Health Unit offers a multi-faceted approach to providing inpatient mental health treatment. Treatment begins with an evaluation of behavioral health needs via a trained staff of nurses, social workers, psychiatrists, and other mental health professionals. Therapy includes individual and group counseling, family meetings, medication evaluation and adjustments; daily psychiatrist visits, electroconvulsive therapy, crisis intervention, and disease education.

- Admissions accepted 24 hours a day, 7 days a week
- 24-Hour Crisis Hotline available toll-free 1-800-339-5209

Cardiac Rehabilitation

Cardiac rehabilitation is a comprehensive, individualized program of exercise and education to assist patients in recovering from a cardiac event and to help them lead a healthier and safer lifestyle. It is designed especially for people who have experienced a heart attack, coronary bypass surgery, angina, congestive heart failure, or valve surgery.

- Mon-Wed-Fri. from 7:00 a.m. to 7:00 p.m.
- 716-375-6224

Cardiopulmonary Services

Most Cardiopulmonary Services are available 24-hours a day for inpatients. Outpatients may schedule through Central Scheduling weekdays from 8:00 a.m. to 4:00 p.m. Some weekend appointments are also available.

- Department Phone # 716-375-6220

Electrocardiograms (EKGs):
An EKG is a test that records electrical signals from your heart onto a paper strip. The pattern of these signals can help tell the doctor whether your heart is normal, under stress, or experiencing electrical problems, strain, or damage.

Electroencephalograms (EEG):
An EEG is a test that measures brain wave activity. It is used to assess brain function. Doctors may order this test to check for seizures or other brain problems. For this test, small metal disks (electrodes) are attached to the scalp with water-based gel or paste. During the test, wavy lines (waveforms) appear on a screen or on paper and a physician studies them to assess brain function.

Cardiac Stress Testing:
A cardiac stress test provides more information than routine exercise stress tests, helping doctors recognize which patients are at an increased risk for a heart attack or are candidates for procedures such as angiography, angioplasty and heart surgery. The test can identify areas of the heart muscle that have an inadequate blood supply, provide information about the heart's pumping function, and determine the amount of scarring from a heart attack.
Echocardiography:
An echocardiogram (echo) is an imaging test that helps the doctor evaluate the heart. A transducer device that looks like a microphone is used to bounce harmless sound waves (ultrasound) off the heart. It helps show the size of your heart and the health of the heart’s chambers and valves. Olean General Hospital is the only facility in the area to offer 3D echos as a way of producing the highest quality images and giving the cardiologist the best view of the heart and valves.

Transesophageal Echocardiography (TEE):
A TEE is a test that allows your doctor to record images of the heart from inside the esophagus, or food pipe. These images help the doctor identify and treat problems such as infection, disease, or defects in the heart’s walls or valves.

Pulmonary Function Testing (PFTs):
Pulmonary function tests (also called lung function tests) help measure how well the lungs are working. The tests measure the amount of air a patient breathes out (exhales) and how long it takes for the patient to exhale completely. These tests are performed to diagnose lung conditions such as asthma and COPD. They may be done before and after taking certain medications. They may also be used to find out whether shortness of breath gets worse with exercise.

Bronchoscopy:
A bronchoscopy is an exam used to help diagnose lung problems. A thin, flexible tube called a bronchoscope - with a special light and tiny camera attached - is used to view the breathing passages. This procedure can be used to diagnose a variety of medical diseases and conditions from tuberculosis to cancer.

The Sleep Disorder Center
The most important aspect of diagnosing and treating a sleep disorder is by properly evaluating a patient in a quiet, relaxed, natural sleep environment. The Sleep Disorder Center is located in the Hampton Inn in Olean which allows it to offer all the amenities of a luxurious hotel stay, coupled with state-of-the-art observation and testing equipment. Additionally all sleep studies are read by board-certified sleep physicians.

716-373-9301 for consultation, or 373-9300 to schedule.
The Outpatient Diabetes Education Program has been continuously awarded the American Diabetes Association Recognition status since 1993. The program and faculty can help patients gain the skills and knowledge necessary to lead a happy and healthy life with diabetes. The Outpatient Program consists of a 10-hour workshop divided between three classes and an individual assessment appointment with Certified Diabetes Education Nurse or Registered Dietitian. Individualized counseling is also available for those who have specific needs.

Inpatient Diabetes Education is also offered. The Diabetes Education faculty is available for consults and educational needs. Specific “survival skills” such as monitoring blood glucose or meal planning can be taught in the hospital setting.

Diabetes Support Group meetings are free to anyone in the community. The group meets the third Tuesday of every month, 6:30-7:30 PM, except December. At each meeting, a speaker presents a topic of interest to persons with diabetes.

Medical Nutrition Therapy is offered for those who have specific meal planning needs. Meal planning is a cornerstone in the proper management of diabetes.

Dialysis

The Marie Lorenz Dialysis Center at Olean General Hospital provides care to patients with chronic kidney disease. Dialysis is a treatment to remove waste and excess fluid from the blood. Patients receive dialysis treatments 3 times per week for 3-4 hours.

Mon. - Sat. 5:45 a.m. - 7:00 p.m.

Education

Olean General Hospital offers several education opportunities in addition to childbirth and nutrition classes. The hospital offers Smoking Cessation, Advanced Cardiac Life Support (ACLS), Basic Life Support (BLS), IV Therapy, Basic Arrhythmia, and Bloodborne Pathogen classes. Class schedules and instructors are subject to change so interested individuals are encouraged to call for the most current information.

716-375-6156
Olean General Hospital’s Department of Emergency Medicine offers medical care 24 hours a day. The department consists of two areas, the acute care area (for a higher level of care), and the Immediate Treatment Center (ITC) for a lower level of care. Every patient is triaged to determine the correct level of care. The Immediate Treatment Center is for patients whose problems need treatment but are not emergent, such as lumps, bumps, sore throats, sprains, fractures, allergic reactions, lacerations, a cold, the flu, or some other minor condition. The Emergency Department also offers a full complement of support services in diagnostic imaging, laboratory, cardiopulmonary, and surgical services for emergency needs anytime of the day or night.

ITC hours are 11:00 a.m. – 11:00 p.m.; ER open 24 hrs/day

716-375-6275

Laboratory

The laboratory provides a vast array of testing on blood, urine and other body fluids. In addition cultures can be performed on a number of sources including those obtained from urine, throat, eyes, ears, throat, and fecal samples. Also pap smears can be performed using the state of the art Cytec Imager. The Lab can also collect samples for DNA/genetic testing. Services are available at several convenient patient service centers:

Olean General Hospital
515 Main Street
Olean, New York 14760
Mon-Fri 7:00am-6:00pm
Saturday 7:00am-1:00pm

Free valet parking!

(716)-375-6230

Medical Arts Building
2223 West State Street, Suite 105
Olean, New York 14760

Business Resource Center
4039 Route 219
Salamanca, New York 14760
Mon-Fri 7:00am-12:00pm & 1:00pm-3:30pm

(716)-372-2678

Olean General Hospital Patient Service Center-Franklinville
49 North Main Street
Franklinville, New York 14737
Mon-Wed-Fri 7:00am-12:00pm & 1:00pm-3:30pm

(716)-676-5080

For homebound individuals, a phlebotomist is available for blood collection at the patient’s residence.

Contact (716) 375-6246 for home phlebotomy services.
Nutritional Services

The Food & Nutrition Department offers a liberalized diet to patients with customized meal plans. Hostesses work with patients at each meal time to take meal orders, prepare trays, and deliver the homemade, restaurant-style meals to each patient.

The Marketplace Cafe is a full service cafeteria with a variety of daily grill choices, hot nutritional daily specials, a salad bar, and dessert selection. Registered Dietitians offer nutrition counseling by appointment.

Open daily from 7:00 am to 6:30 pm.
716-375-6297

Wound Center and Hyperbaric Medicine

The Center for Wound Healing and Hyperbaric Medicine offers the highest level of wound care including evaluation and treatment for chronic or non-healing wounds. The Center has specialized testing on-site, such as transcutaneous oxygen monitoring (tcp02) to determine if a wound has sufficient oxygen supply for proper healing to occur. If the oxygen levels are inadequate, the patient may be a candidate for hyperbaric oxygen treatment (HBOT) via one of several pressurized oxygen chambers available at the Center.

Mon. - Fri. 7:30 a.m. - 4:00 p.m.
716-375-7577

Dental Services

The Gundlah Dental Center offers preventative, basic and major restorations, dental prosthetics (dentures), basic oral surgery and other services, such as restorations, crowns, veneers, extractions, complete dentures, partial dentures, root canals on front teeth, bleaching, routine cleanings, and sleep apnea oral devices. The Center also offers same day care for dental emergencies and discounts for senior citizens.

Mon. - Thurs. 7:00 a.m.-5:00 p.m. & Fri. 7:00 a.m.-12:30 p.m.
716-375-7300

Valet Parking / Van GOGH
Patient Transportation

The hospital offers free valet parking and a van service for transporting patients in the Olean area, who cannot otherwise get a ride to their hospital appointments during the week. This is offered on a scheduled basis. The van is not wheelchair accessible.

716-375-6400
Occupational Wellness Center

The Occupational Wellness Center offers a variety of services designed to meet the needs of area industries and their employees. The staff is trained in the performance of Department of Transportation (DOT) physical exams, ROTC physicals, pre-employment physicals, medical monitoring physical exams, as well as return-to-work evaluations.

Pre-employment, post accident, random drug screenings, and breath alcohol testing are performed in compliance with federal regulations. Certified Occupational Hearing Conservationists conduct audiograms to assist with industries’ hearing conservation programs.

Mask fit testing in conjunction with OSHA Questionnaire reviews, asbestos clearance, pulmonary function testing, and/or chest radiography are conducted, reviewed and clearance provided. The center is also available for initial assessment, treatment, and management of work-related injuries and related follow up care.

Lab testing for medical monitoring or immunity documentation is performed here as well as immunizations per compliance with company policy.

Mon - Fri from 8:00 a.m. - 4:00 p.m.
(716) 375-7495

Patient Scheduling

Scheduling is required for Cardiopulmonary, Diabetes Education, Outpatient Services, Outpatient Laser Eye, Radiology Procedures and Van Gogh rides. The office is open Monday thru Friday 7:30am-5:00pm.

(716)375-6400

Pre-Registration

Pre-registration is encouraged so patients can bypass the main registration area and save time during the registration process. Pre-registration can be done for all Cardiopulmonary, Radiology, Diabetes Education, Outpatient Services, Outpatient Laser Eye, and Lab procedures. Pre-registration can be done online at www.ogh.org or by calling 716-375-6400.

Preadmission Department

To register and make any necessary appointments for testing for all surgical patients, please contact

Monday - Friday 9:00 a.m. - 4:30 p.m.
375-7434

Any patient scheduled for surgery at Olean General should call to register at least two weeks before the surgery.
Physical Medicine and Rehabilitation

The Physical Medicine department offers a variety of services for individuals who suffer from neurological and musculoskeletal disorders including back pain, knee, shoulder or other joint problems, herniated discs, spinal stenosis, carpal tunnel syndrome, arthritis, tendinitis, sports-related injuries, spinal cord injuries, stroke, amputations, and spasticity.

Treatments may include Electro-diagnostic testing (commonly known as EMG or Nerve Conduction study), Trigger point injections, Ultrasound-guided injections, Lumbar epidural steroid injections, Peripheral joint/tendon injections, Botox injections for spasticity/dystonia, Osteopathic manipulation, and Physical Therapy Prescription.

Mon. - Fri. from 8 a.m. - 4:30 p.m.

(716) 375-7333.

Outpatient Physical Therapy Services

Rehabilitation Services includes occupational therapy, physical therapy, and speech therapy. These services all focus on restoring, improving, and maintaining patients' level of functionality.

Physical therapists help people with orthopedic conditions such as low back, neck, or shoulder pain; joint and soft tissue injuries such as fractures and dislocations; neurologic conditions such as stroke or Parkinson's disease; connective tissue injuries such as burns or wounds; and workplace injuries including repetitive stress disorders and sports injuries. Occupational therapy focuses on enabling people to perform the activities of daily life that may have been compromised due to illness or injury. Speech therapy focuses on correcting problems associated with speech, comprehension, and swallowing.

Mon. - Fri. from 8:00 a.m. - 4:00 p.m.

(716) 375-7495

Salamanca Primary Care Center

The hospital maintains a primary care center located in Salamanca, NY. Under the direction of Arun Patel, M.D., the practice is staffed by Libby Smith, N.P., The Center offers adult medical care to residents of the Salamanca area as an outreach of Olean General Hospital.

716-945-0361
Subacute Rehabilitation

Patients often need to strengthen their muscles, joints, or lungs after being hospitalized and before they are ready to go home. The Subacute Rehabilitation Unit offers skilled nursing, physical, occupational, speech and pulmonary therapy to help patients make the transition from their acute hospital stay to being able to return home. All subacute care is under the direction of a physician.

716-375-6940

Physical therapy is a daily component of sub-acute rehabilitation.

Surgical Services

The Operating Room consists of six surgical suites. Over 5,200 surgical procedures are performed each year on patients of every age group. Some of the surgical specialties include Ear, Nose, Throat (ENT), Orthopedics, Thoracic, Gynecologic, Ophthalmic, Vascular and general surgeries. The surgical team also offers gender-specific total knee replacements.

Surgery is available 24 hours/day
Pre-operative educational videos are available online at www.ogh.org.

The Digestive Disease Center has four suites and performs approximately 4,500 procedures a year. The most common procedures are colonoscopies, which are visualizations of the colon using a thin flexible tube with a tiny camera. The team also performs Esophagogastroduodenoscopies (EGDs), which are visualizations of the esophagus, stomach and duodenum, and Endoscopicretrogradecholangiopancreatographies (ERCPs) which are visualizations of the bile duct to examine for stones or obstructions.

7:00 a.m. - 6:00 p.m.
716-375-7433

Ambulatory and Outpatient Services consists of 14 bays and 3 recliners. The outpatient team provides service to patients in need of blood and blood products, iron infusions, antibiotic infusions and injections. All bays are equipped with televisions for use during pre- and post-procedure preparation and recovery.

6:00 a.m. - 7:00 p.m.
including all pre- and post-operative care
OB / Labor and Delivery

The OB unit offers specialized nursing care for both mother and baby. The labor and delivery unit has four Labor and Delivery rooms and state of the art fetal monitors. The department offers 24 hour epidural service and a jacuzzi tub for pain relief while in labor. Cesarean Sections are also performed right on the labor unit without the need for mothers to be transported to surgery. All rooms are equipped with specialized equipment for neonatal resuscitation and all staff are trained in Neonatal Resuscitation.

The Post-Partum unit offers 10 private rooms and 2 semi-private rooms with sleep chairs available for a support person. Gourmet meals are offered to all new mothers and their support person and Lactation Educators are available daily to assist all mothers.

The Nursery is fully appointed with necessary equipment to stabilize any newborn requiring specialized care. Newborn hearing screening is performed on all newborns before discharge and baby care instruction is offered to all new mothers.

Prepared Childbirth classes are offered throughout the year, including several one day (Saturday) classes. Infant CPR is incorporated in our child birth classes, along with instruction in child car seat safety, and Lactation Educator offers breast feeding instruction.

716-375 6254 to schedule any test

The Diagnostic Imaging Department is fully accredited by the American College of Radiology.

Abdominal Ultrasound
Abdominal ultrasound is an imaging test that uses sound waves to form pictures of the abdominal organs. It can help detect organ problems such as gallstones, kidney stones, or liver disease.

Bone Density Study
A bone density study helps diagnose osteoporosis (bone thinning). Scans of the lower back, hip, or forearm are taken to measure the amount of calcium (density) in the bones.

Computed Tomography (64-slice CT)
A CT scan is a test that combines x-rays and computer scans. The result is a detailed picture that can show problems with soft tissues (such as the lining of the sinuses), organs (such as the kidneys or lungs), and bones. During the test, patients lie on a table that slides them into the scanner. They may be given contrast through an intravenous (IV)
OGH uses a 64-slice CT scanner which offers unsurpassed image quality and some of the fastest scan times available to maximize patient comfort.

**Computer Tomography Angiography (CTA)**
CTA creates images of arteries throughout the body by using a CT scanner. A contrast medium (x-ray dye) is injected to make the blood vessels stand out, while pictures are taken with the CT scanner. The CT images are processed by a computer to make a three-dimensional view that is read by a radiologist and cardiologist. CTAs may be used to examine arteries in the abdomen, neck, lungs, pelvis, kidneys, or brain; to look for an aneurysm (ballooning of the blood vessel wall) or dissection (tear); to see whether a stent (device used to keep an artery open) is working properly; to detect damage to arteries due to injuries, or to gather details on blood vessels that supply tumors.

**Lower GI Tract X-ray (Lower GI)**
A Lower GI test is an x-ray examination of the large intestine, also known as the colon. This includes the right or ascending colon, the transverse colon, the left or descending colon and the rectum. The appendix and a portion of the small intestine may also be included.

**Magnetic Resonance Imaging (Wide Bore Open MRI)**
An MRI is a test that lets the doctor see detailed pictures of the inside of the body. An MRI combines the use of strong magnets and radio waves to form an MRI image. Because of the strength of the magnet, patients need to remove all jewelry or metal before entering the MRI suite. Patients may be given contrast through an intravenous (IV) line or by injection to help with obtaining the highest quality images. OGH utilizes the Espree Wide Bore Open MRI to accommodate patients of any size while decreasing scan times and providing the most detailed images available from any scanner.

**Mammography**
Mammography is an x-ray exam of breast tissue. The image produced is called a mammogram. A mammogram can help detect problems with the breasts such as cysts or cancer. In the event of a positive mammogram result, OGH offers ultrasound and stereotactic breast biopsies to determine whether a lump is cancerous. A stereotactic biopsy is much less invasive than other biopsies and uses a thin needle to extract tissue samples for analysis.

**Nuclear Medicine**
A nuclear medicine scan uses a special camera to create pictures of internal organs (such as the heart, lungs, liver, and gallbladder) as well as bones. This test uses a small amount of radioactive material and a special camera. Patients lie on a narrow table and the camera is placed close to the body. Patients may be asked to lie very still to ensure the highest quality images.

**X-Ray**
An x-ray uses a small amount of radiation to create images of the bones and internal organs. X-rays are most often used to detect bone or joint problems, or to check the heart and lungs (chest x-ray).
